ENA
IF YOU LOVE COFFEE

Any coffee you choose

With an ENA machine, you can use any type of fresh coffee beans you like. Whether you go for the exclusive blend from your local roaster or a special-offer multipack, the ENA is designed to get the optimum enjoyment out of any blend or roast.

Selectable coffee strength

Like all JURA bean-to-cup automatics, the ENA also features the patented variable-volume brewing unit, which prepares between 5 and 16 grams of coffee under ideal conditions. An advantage you can taste, cup after cup after cup.

Ecological intelligence

Zero Energy Switch

This innovative piece of technology, registered for patent by JURA, does not interrupt any process already started. Any coffee being made will be finished before the automatic pre-switch-off rinse takes place. Finally, the switch disconnects the machine completely from the mains and the ENA uses no standby energy.

Energy Save Mode (E.S.M.®)

In situations where the ENA is infrequently used, the Energy Save Mode can be switched on to reduce power consumption by up to 40%.

Energy saving potential approx. 40%
